

WORKSHOP

MAPPING, MONITORING, MANAGING: USING TECHNOLOGY ACROSS COUNTRY

1:00 PM to 4:30 PM

Tuesday, 17 November

Darwin Convention Centre

\$115 Member
\$125 Non-Member

REGISTER NOW

From space to soil, discover the tools reshaping how we survey and manage Country.

This workshop brings together people interested in conservation technology, covering satellite mapping for weed detection, airborne environmental DNA, genetic biocontrols for invasive species, AI-powered camera trap analysis, choosing the right equipment for the data you need, using drones to detect ghost nets, and the night vision and thermal tech opening up a whole new way of seeing wildlife.

Whether you're in ecology, land management, or ranger work, this is a chance to see what's next for biodiversity monitoring and management in the NT and beyond.
